TerraScreen™

The most efficient, effective, and maintenance friendly live wall system designed specifically for the interior.

Often described as living art, TerraScreen™ allows the designer, landscape contractor, or owner to use “plants as paint” to establish a living, breathing focal point, set a mood, or celebrate a season.

TerraScreen™ was originally developed by Planterra, a leading interior landscape design and maintenance company, specifically to meet the needs of the hospitality industry. It is the solution to the challenge of installing a living wall that is instantly lush and easy to refresh and maintain.

We recognize that styles change and spaces evolve. TerraScreen™ offer more flexibility than any other green wall system; designed so that the planting may be easily updated so the installation is appropriate to the style, season, and environment.

TerraScreen™ is manufactured and sold to the trade by Tournesol Siteworks, as part of its broader line of unique green building products, irrigation solutions and site furnishings.

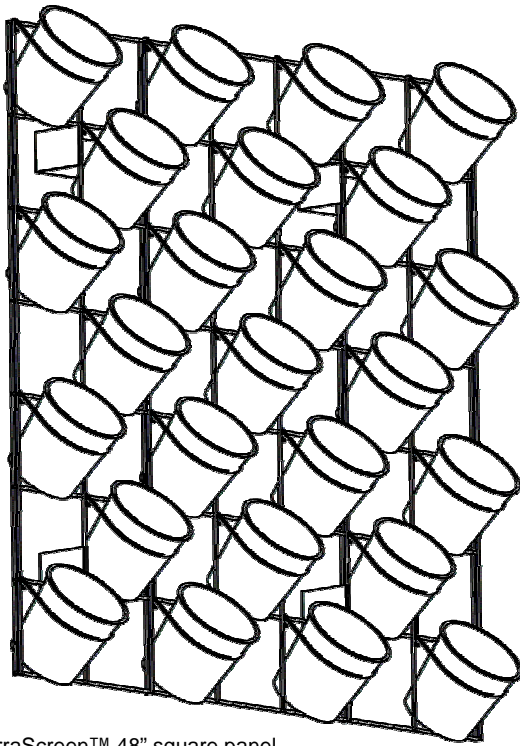

TerraScreen™ Features & Benefits

- Instantly Green - looks great from day one
- The best “intimate” greenwall system— panel system disappears behind foliage.
- No waiting for pre-grown panels. Designed to be planted with readily available 6” plants
- Maintenance friendly - can be maintained by any interior landscape contractor.

TerraScreen™ 48" square panel showing typical cachepot setup.

TerraScreen™ Modular Panels

Modules	Overall Dim.	# 6" plants	empty wt.
TW-7049	70"h X 49"w x 4-5/8"d	35 plants	30 lbs.
TW-4949	49"h x 49"w x 4-5/8"d	25 plants.	25 lbs.

All modules are made of black powder-coated galvanized steel wire, with integral brackets to fasten the panel to the wall. Panels may be mounted adjacent to one another to create larger coverage areas. Plants are placed in their 6" grow pot directly into the black no-hole cachepot. The hanger system keeps the plants in place. Replacements are simple—just remove the plant from its cachepot, put another in its place.

Accessories

TW-PTSL	Black no-hole cachepot 6.5"dia x 6.25"h
TW-HGR	Black no-hole Cachepot hanger
WR-481218	Black Wilshire FRP catch basin, 48"l x 12"w x 18"h, no holes
TWS-70	Black side cover for end units, for 70"h panels
TWS-49	Black side cover for end units, for 49"h panels

- Panel system stands 4-5/8" from wall, but requires minimum of 18"
- All TerraScreen™ systems should include a catch basin mounted below
- TerraScreen™ systems work best if wall behind panels is waterproofed and painted black.
- Approx. panel load - 170lbs. for 48"h, 250lbs. for 72"h TerraScreen™

Tank-based or automatic irrigation system information is available from your Tournesol Siteworks salesperson
